**FERRY ROAD  
HIGHWAY  
BRIDGE OVER  
EJ&E RAILROAD**  
DUPAGE COUNTY,  
ILLINOIS

**DIVISION OF  
TRANSPORTATION**

HOH was responsible for a Phase I Design Study and Phase II Design of Ferry Road from IL 59 to Eola Road a distance of 2 miles. The Phase 1 study developed a new alignment for Ferry Road and a new wider typical cross section to accommodate development planned for the area.

The bridge study and design work included geometrics, drainage and detention storage, profile studies, right of way need determinations, traffic data analysis, and wetland mitigation for a new highway and bike trail/pedestrian bridge over the E J & E Railroad. Utility relocation included high voltage transmission tower relocation and major pipelines impacts and protection.

The project area and coordination included the community of Aurora, DuPage County and the EJ&E Railroad. Public coordination was very active, culminating in a transfer of jurisdiction of Ferry Road from Aurora.
