SCHAUMBURG, IL**

Engineering services for the preparation of contract plans, specifications and estimates for 6 miles of roadway improvements and structural replacement of U.S. Route 14 from IL Route 120 to Lake Avenue in McHenry County.

The project consists of roadway reconstruction and resurfacing, addition of paved/aggregate shoulders, channelization and improvement of 3 at-grade intersections with U.S. 14, widening and resurfacing of one cross street to provide for a median, new traffic signals and modernization of 3 intersections, ditch re-grading, drainage improvements and structural rehab of the South Street cross street bridge over US 14.

Subsequent to the completion of the original project contract documents, specifications and cost estimate, IDOT determined that the South Street Bridge over US 14 should have a complete replacement of its superstructure. An amendment to the HOH/IDOT contract was developed to add this to the scope of work.
