

1869 West Pershing Building **City of Chicago, Department of General Services**

HOH Systems, Inc provided consulting and design services for the buildings new security system.

The new security system provides selective access through the building by card readers, perimeter Low Light Color/BW CCTV and monitoring of perimeter doors. The security system incorporates the use of two-way communication and CCTV for access after hours. The door unlocking system with interface to the fire alarm system and Building Automation meeting the City of Chicago Code provides limited access to each floor but has provision for fire department entry to the floors during a fire condition.

The security system computer network will be able to converse with the building automation system and the City of Chicago system computer network. Emergency condition of the building will be monitored both on-site and off-site as required. Emergency communication to the City of Chicago 911 will through this communication network.
